**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 17, and May 12, 2004 have been entered.

***Allowable Subject Matter***

2. Claims 3-6, 20-23, 29-33, 37-41, and 52-56 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art references to the present invention is to Conger et al (USPat. 4,761,269), Hao et al (USPat. 6,123,775), Tomita et al (USPat. 5,423,936), and copending Application No. 09/798,258. Conger, for example, teaches a lid assembly (16; Figure 2; column 5, line 54 - column 6, line 26; Compare applicant's lid 20; Figure 2) for a semiconductor processing system (column 1, lines 10-15). Refer to prior office actions for additional claim limitations.

Art Unit: 1763

Currently, all amended independent claims 3, 22, and 31 now recite a gas "reservoir positioned on the lid". The closest prior art reference to Conger teaches a reservoir (56; Figure 1) coupled to the valves 22a,b; Figure 2. Yet, as shown by Conger, his reservoir is not positioned on his lid. None of the other prior art references teach or suggest such a gas reservoir positioned on the lid as claimed by independent claims 3, 22, and 31.

Newly added claims 52-56 are allowable for the same reasons independent claims 3, 22, and 31 are allowable. Specifically, new independent claim 52 recites "a gas control system disposed on the first surface" of the lid "the gas control system comprises: ... a gas manifold disposed on the lid...at least one precursor reservoir fluidly connected between at least one precursor source and the gas manifold". New independent claim 54 recites "a gas control system disposed on the first surface" of the lid "the gas control system comprises: ... a gas manifold disposed on the lid...at least one precursor reservoir fluidly connected to the gas manifold".
